

Rebuild

Allied Systems Company Factory Rebuild Program

Wondering what to do with that used Allied winch? You know how hard Allied winches are worked. You also know that your winch has some life left in it. Instead of trying to sell it as-is, with no warranty, have it rebuilt at the factory.

A basic rebuild includes:

- Gaskets
- O-rings
- Seals
- Brake friction materials
- Clutch friction materials
- Filters
- New paint
- New decals
- Factory testing
- 6-month factory warranty for parts and labor

Contact your sales representative today, or contact the Service Parts Department at Allied Systems Company to schedule your rebuild.

*Basic rebuild includes replacing gaskets, O-rings, seals, brake and clutch friction materials, filters, decals, repainting the winch, and testing to new winch specifications. If additional items or repairs are necessary, Allied Systems Company will request approval before proceeding.

Note that other winch models may be rebuilt upon request. In addition to rebuild, Allied Systems Company can convert any Allied winch to fit a different tractor model where feasible.
