PLM Equipment Tracker

PLM EQUIPMENT TRACKER is an exclusive cloud-based equipment management software program designed for pipeline contractors. Know where your asset is, whether or not it's being used how much fuel it's burning. Mixed fleet of assets? No problem. PLM Equipment Tracker pulls all data into one application with no additional hardware needed.

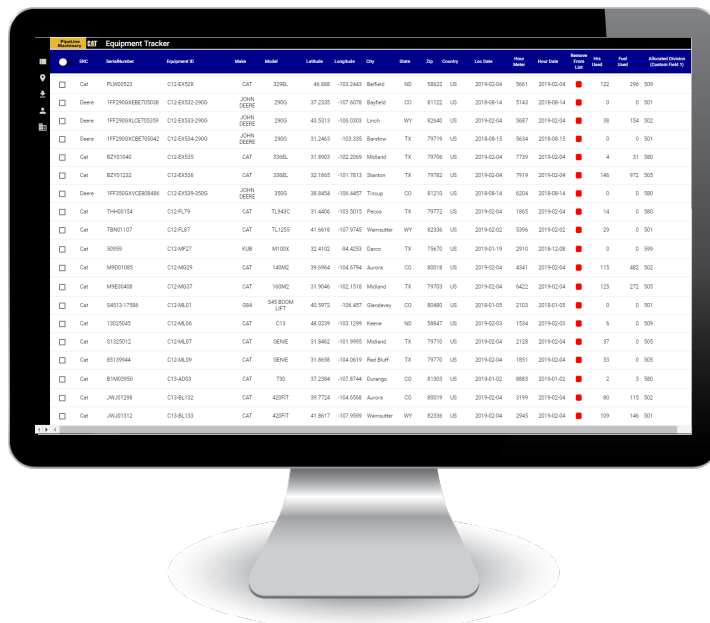

- Location
- Utilization
- Fuel Burn

Features:

- API data consolidation tool with a mapping feature and master list integration.
- Run reports based on data collected from all assets:
 - ✓ Audit jobsite locations to ensure assets are being billed to the right project
 - ✓ Fuel use per jobsite / state / zip code for fuel reporting
- Utilization reports based on internal descriptions:
 - ✓ Where are my thumb machines and which ones are not working?
 - ✓ Am I using my ripper tractors and do I need more?

Benefits:

- Keep your OEM telematics box which has a lot of advantages:
 - ✓ Many OEMs offer free to life periods for their subscriptions
 - ✓ OEM boxes are built to each manufactures standards and can supply OEM specific data
 - ✓ OEM sites, like VisionLink®, offer features that you will not lose
- Save money with one low monthly subscription
- Save time with PLM Equipment Tracker putting all data into one program - one single source for all information.
